

Hyderabad Polymers Private Limited Baffle Bags

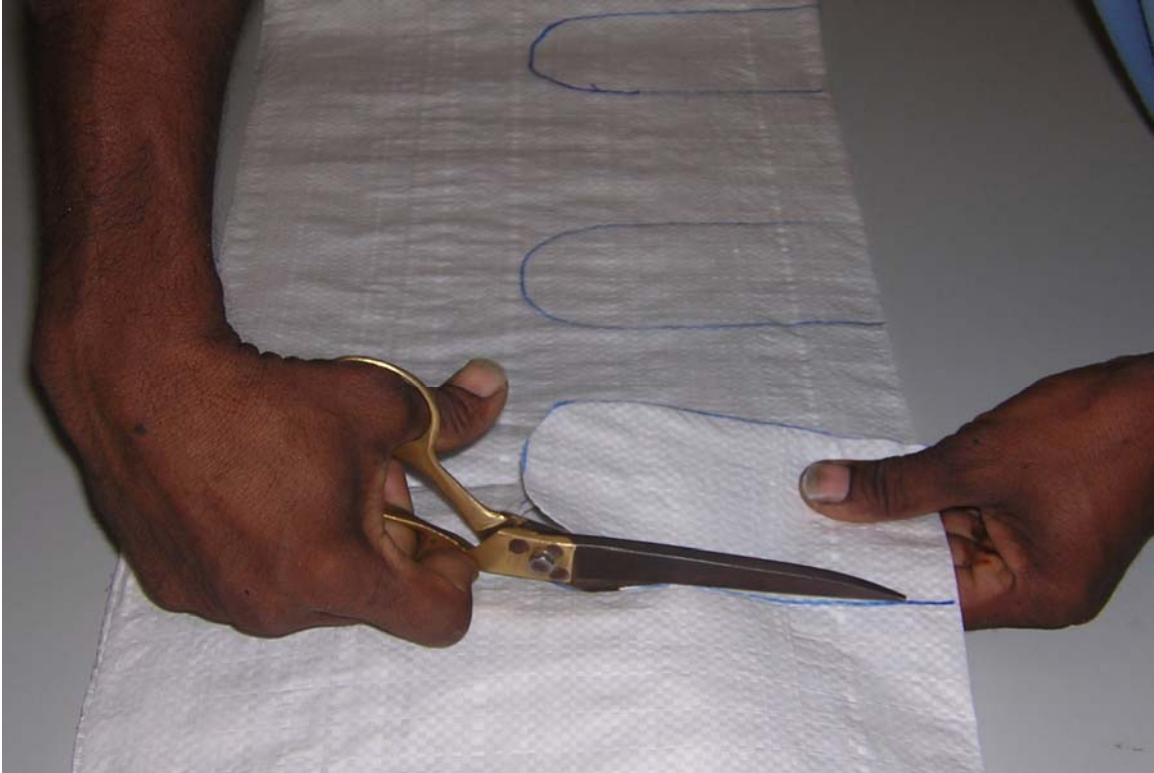

This document briefly describes the various operations involved in producing a specialty bag called the Baffle Bag. These baffle bags are also termed as Q-Bags or Square Bags. Baffle bags are mainly used where there is a lot of concern with respect to the stacking of the loaded or filled bulk bags. Baffle Bags are designed to give added stability to light and low-density products. This bag is designed with interior baffles sewn cross corner style. Product flows through the baffle panels to facilitate filling and unloading.

We at Hyderabad Polymers Private Limited have specialized in producing these baffle bags for our customers in Europe. The pictures below depict the various stages involved in the making of a Baffle Bag.

The Picture below shows the Baffle Panel with markings. These Baffle Panels are coated double side to prevent falling of loose edges of fabric.

The Baffle Panel is cold cut along the markings using hand scissors.

The Picture below shows the baffle windows cut on the Baffle Panel

The picture shows the attaching of baffle panel to the body panel on the inside of the bag.

The picture below shows the bag with baffle panels attached to four corners of the bag on the inside.
